

Communications Manager

- PTC and ATCS data radios
- Frame relay and MPLS
- Satellite and cellular
- Digital lines, including T-1
- DC codeline / stepper units
- Fiber (via converter unit)
- WIU and Microprocessor controllers

The Safetran Communications manager provides complete support for PTC and CTC communications including legacy and PTC-based interoperable protocols.

PTC and CTC Application

The Communications Manager provides a complete solution for all of your wayside communications needs:

- Integrates multiple wayside communication devices into a single, cost-effective platform.
- Supports unmatched connectivity options – data radio, MPLS, frame relay, satellite, serial modems, DC code and more.
- Provides solutions for private and public communications, including redundant path management with user-defined priorities.

Cost Savings

With the Communications Manager, users can consolidate an array of separate devices into a single platform – for less than 40% of the price. Enhanced maintenance tools allow complete visibility of any location – without the need for costly site visits.

Features

- Provides complete suite of PTC and CTC protocols for interoperability.
- Supports multiple Ethernet and serial interfaces to interconnect wayside devices.
- Integrates seamlessly with existing CTC systems, NMS tools and SNMP-based systems.
- Provides a complete migration path to PTC while leveraging existing assets.
