

Training Overview

Fleet Controller

Course Group Core TCMS

6th January 2010

The Product

Train Control and Management System (TCMS) is a Systemat/CS platform system used for train control for control of metropolitan passenger railways. It is the Signallers' intelligent interface with the Signalling and Passenger Information System and assist the control centre staff in managing train movements, advice and reporting with minimal user input.

Target Audience

Fleet Controllers who are responsible for managing the availability of the fleet on the existing railway. It provides a bridge between their current skills and the new competencies of the new system.

Competencies

On completion of this course, participants should be able to:

- Describe the changes between the existing system and Core TCMS as seen by these operators
- Demonstrate system log-on and log-off
- Identify each symbol on the mimic displays
- Demonstrate use of paper Docking Sheets and POTS [what is POTS???] to track services
- Demonstrate emergency procedures

Course Details

This is a theoretical and a practical based course that provides Fleet Controllers with the skills to use the interfaces on the TCMS system. The Fleet Controller course is conducted on the customer's TCMS

installation and is presented over 1.5 days with a maximum of 3 participants. Theoretical training consists of the TCMS operating principles supported with visuals. Practical training, the major component of this course, consists of executing all functions on the TCMS simulator.

We give each participant a copy of the Fleet Controller manuals and a training manual. We continuously assess participant's competency during the training and issue a Certificate of Competency to participants demonstrating competency.

Location	Client's Facility
Duration	1.5 days
Format	Full time work release
Requirements	Access for fully equipped training facility Normal presentation support Access to installed equipment

Training Pre-Requisites

Participants should be proficient in a similar Fleet Controller role on the existing train control system.
